

IGNIS 2500 automatic fire extinguishing control panel

IGNIS 2500 fire extinguishing control panel- **new standard for integration** with fire alarm control panels.

Two versions of the IGNIS 2500 control panel allow for a **high system flexibility**.

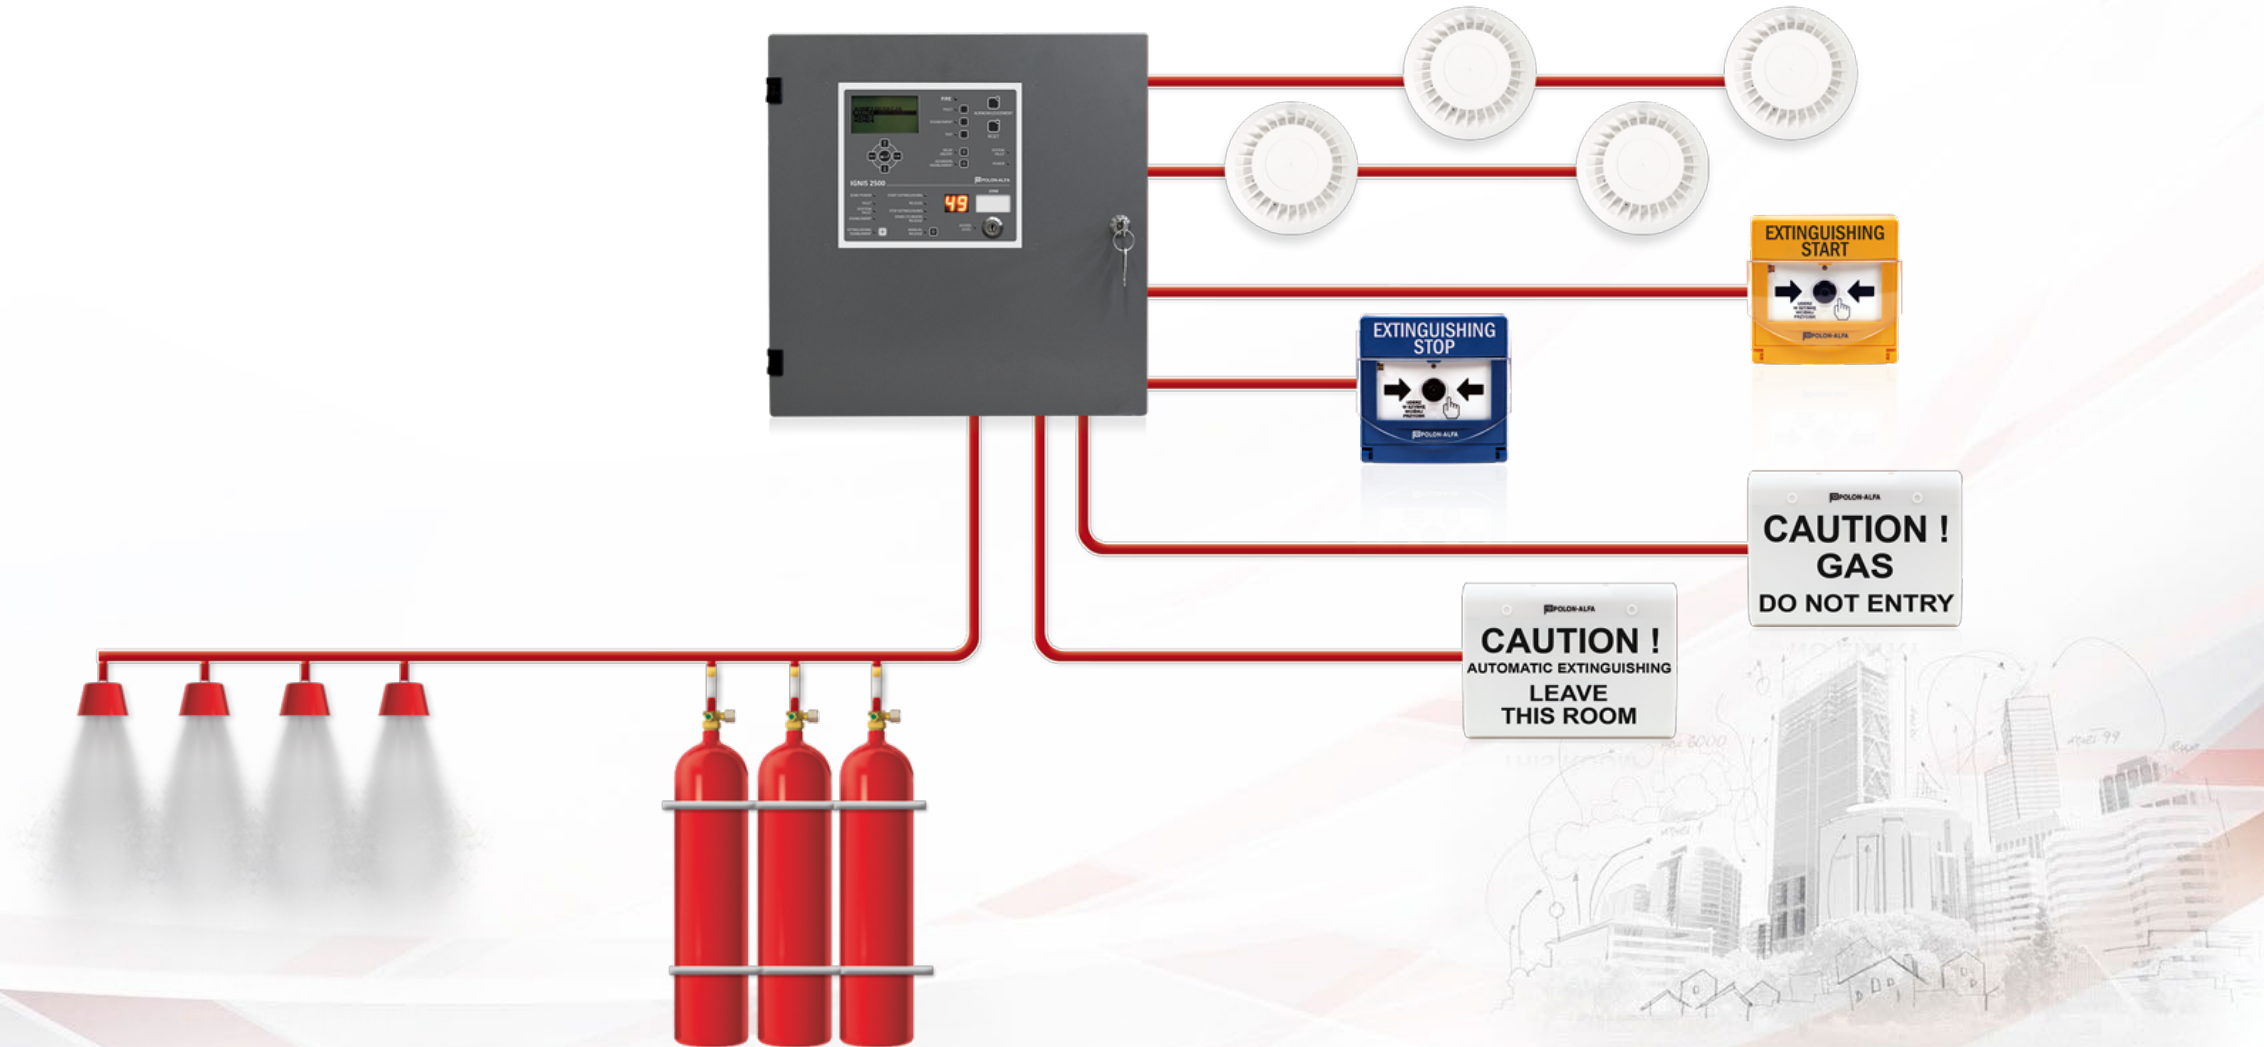

One-zone control panel

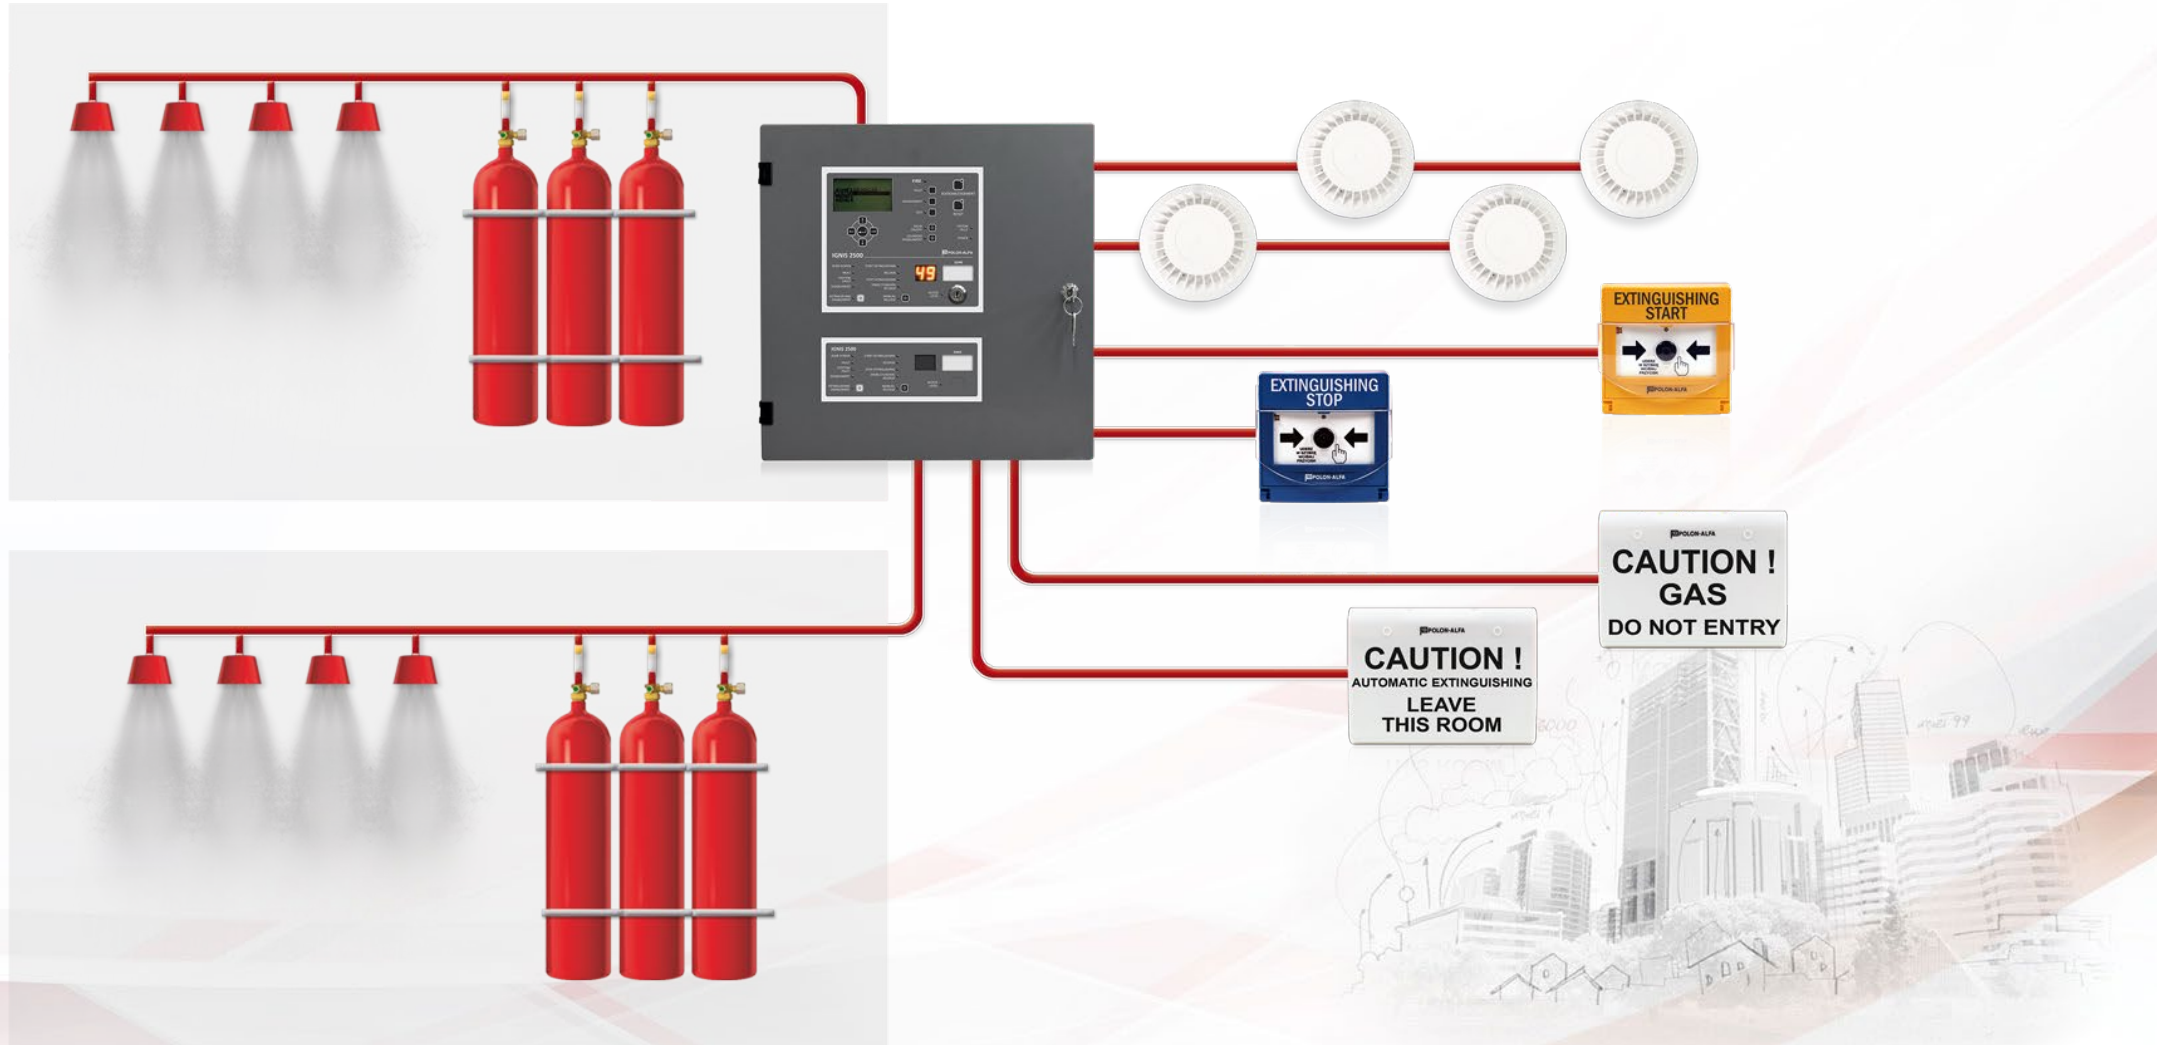

Two-zone control panel

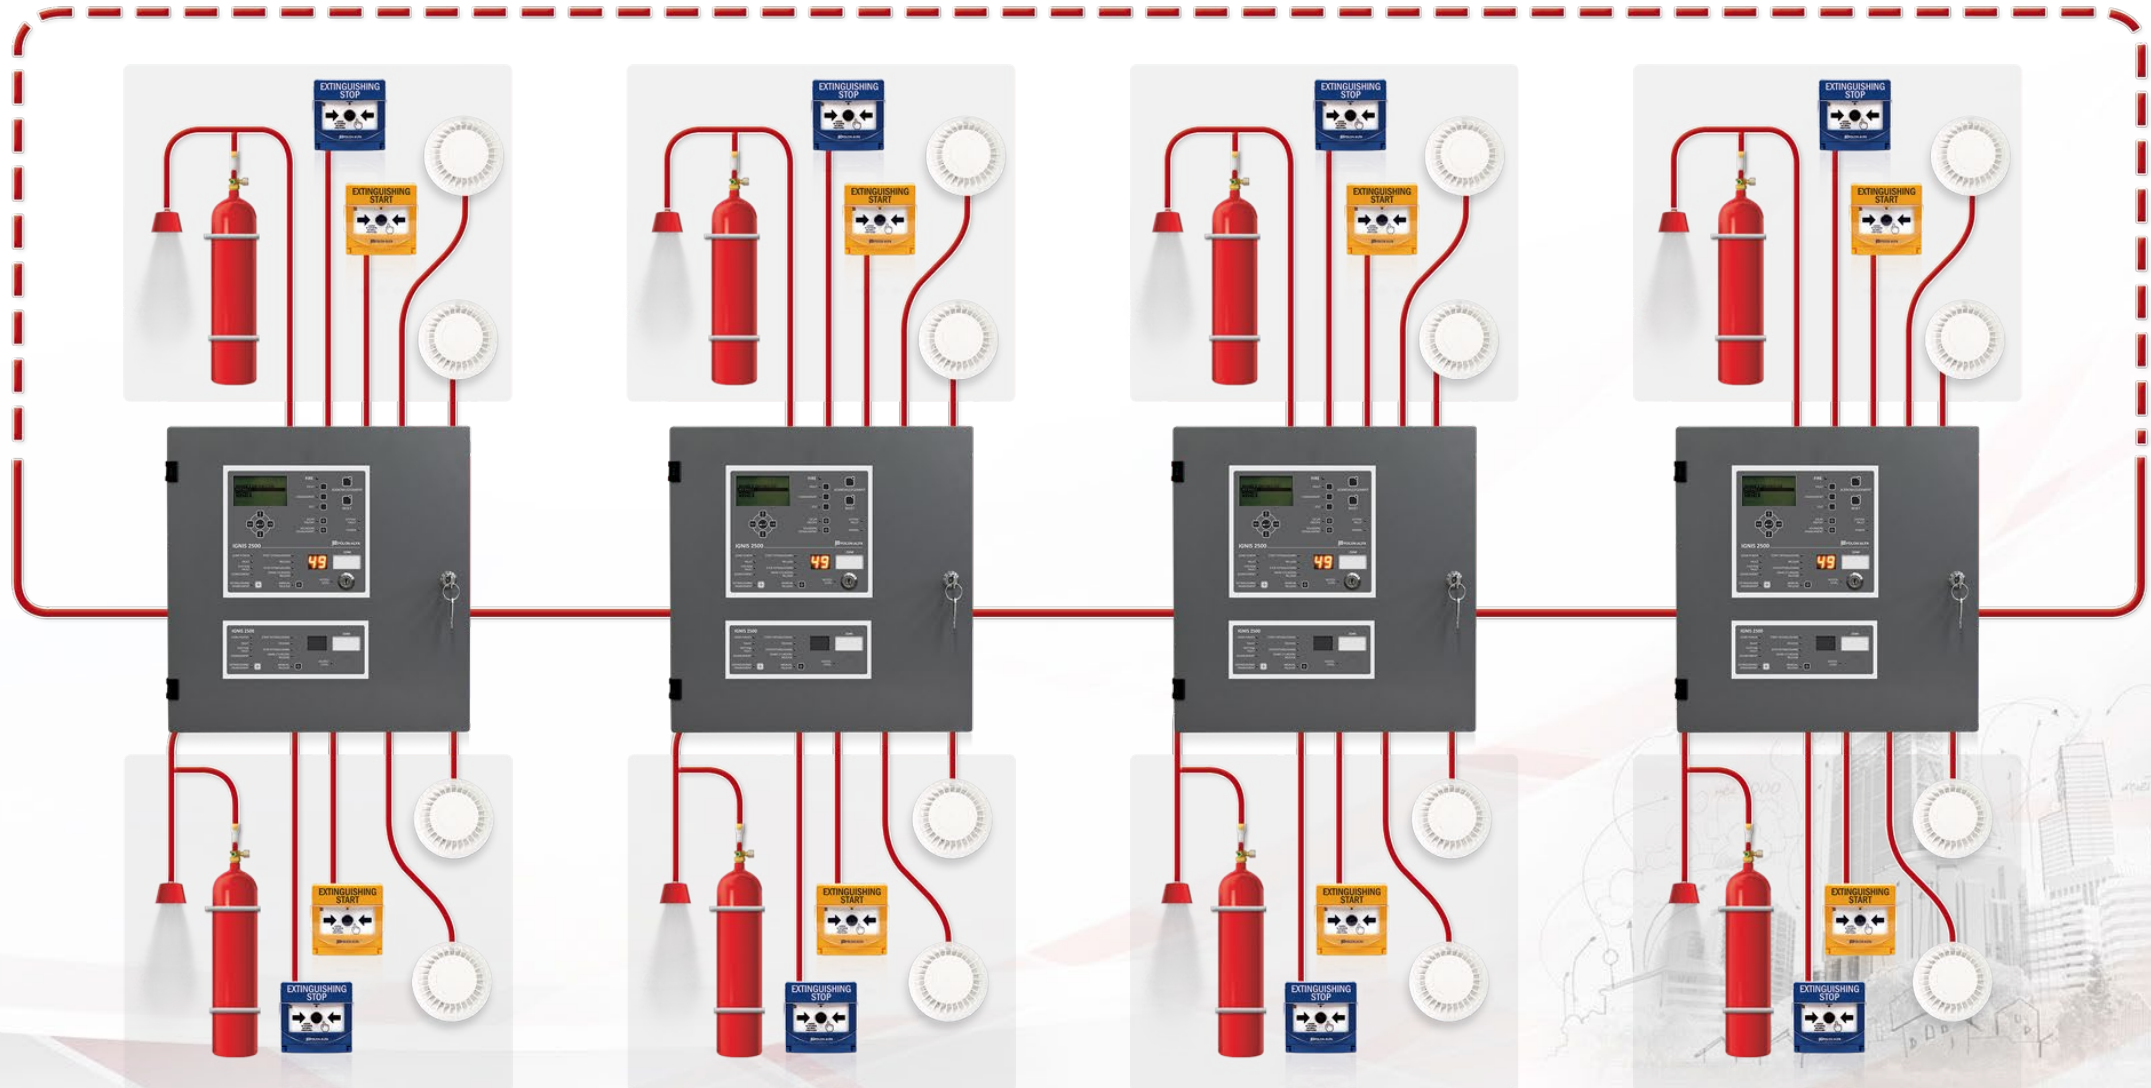

Simple selection of devices for one extinguishing zone in conventional system

The two-zone conventional control panel enables to manage **two extinguishing zones from one location.**

The multi-zone set enables the operation of **up to eight** extinguishing zones.

Operation in an addressable system allows **up to 20 panels** to be connected on a single detection line.

Simple and intuitive ways of configuration allow to **optimize time** of investment.

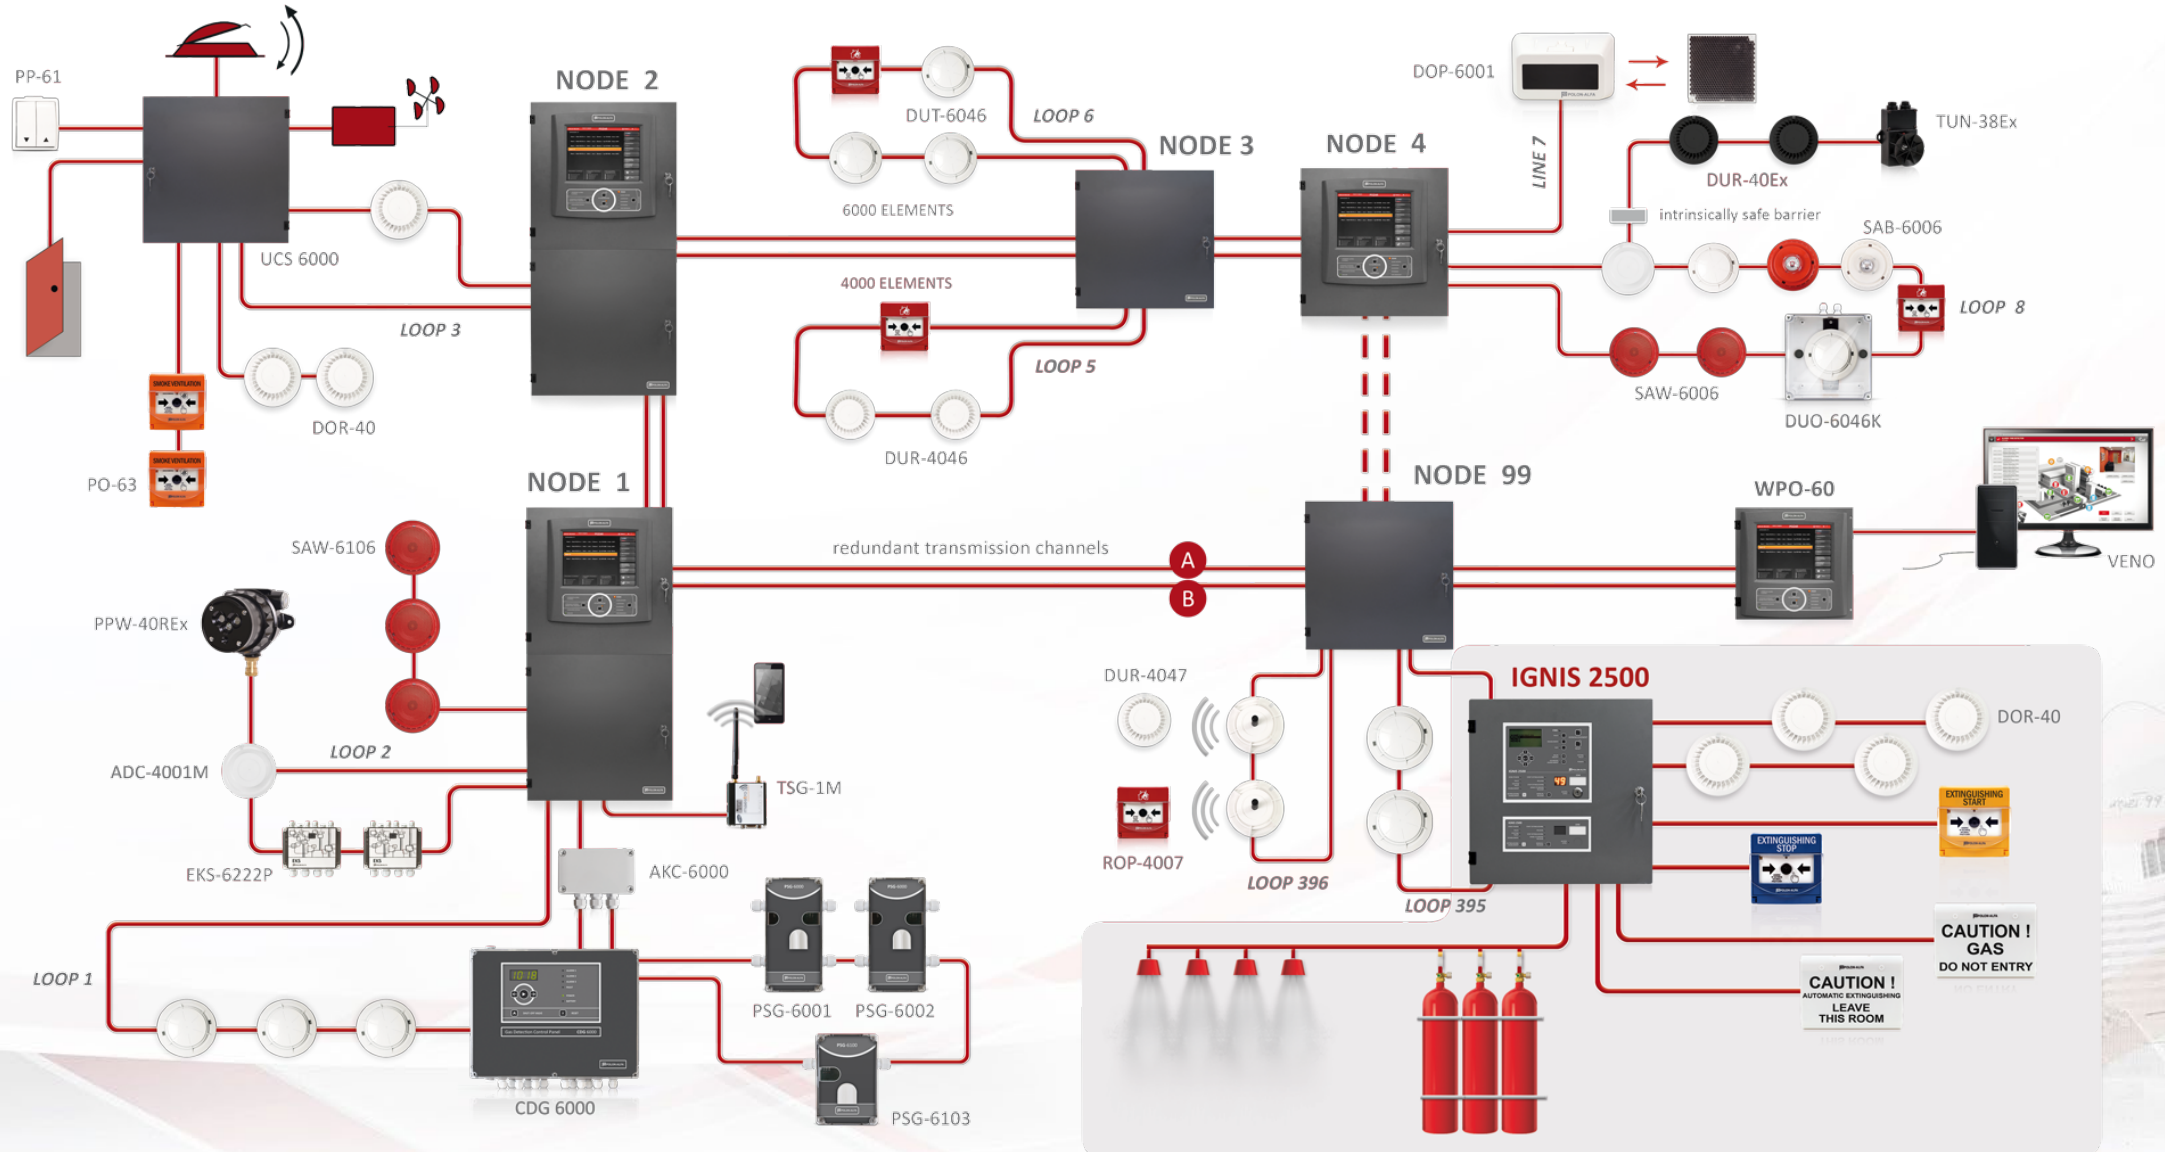

Configuration via PC application

Direct configuration on the panel

An example of integration of safety systems manufactured by **POLON-ALFA**.

Expanded and very flexible security systems,
detecting fire hazards and controlling automatic fire extinguishing,
give an excellent opportunity to protect buildings
and people in them.
